VEERO

Data into impact.

Brand book & website specification

English edition / 14 October 2026
Brand identity, experience, copy and delivery rules

WORKING SPECIFICATION
Confirmed direction + clearly marked proposed details

Read this first

A concrete handoff document with an honest boundary between evidence and design proposals.

Confirmed direction

The reference conversation asks for a lime treatment of the word **impact**, a technology-led **Data as Art** language, and very subtle abstract shapes in backgrounds and transitions. The later preference is for **circles, squares and dots**. The current brief explicitly excludes architectural imagery, glass panels and waves.

What was available

The supplied chat reference, dated 10-14 October 2026, returned five user messages and no assistant replies or image attachments. The approval of the “bottom” option is preserved, but that visual and the latest homepage/content mockups are not available in the retrieved record.

What this edition proposes

All hex values, font choices, wordmark treatment, layouts and visual specimens in this book are **proposed implementation values**, not recovered originals. The specimens reconstruct the confirmed verbal direction; they are not reproductions of the missing mockups. Compare them with the originals before visual sign-off.

Business and content assumptions

This specification assumes VEERO offers B2B data strategy, engineering, analytics and applied AI services. Service scope, team details, delivery commitments, contact information and legal identity have not been verified. All site copy is a coherent editorial draft for owner review, not evidence of company capabilities.

How to use this book

Designers can apply the proposed system consistently now. Developers can build the layouts and content model. VEERO must confirm the original palette, font, logo assets, commercial scope and publishing facts before launch. Do not interpret the document date as brand approval.

PUBLICATION RULE

No invented metrics, customer names, logos, testimonials, certifications or case-study results may appear on the live site. Hide unsupported proof modules rather than filling them with plausible claims.

A working system

Use the brand rules to set the direction, then follow the page copy and implementation requirements.

01 **Brand foundation** 04-09

Positioning, wordmark, palette, gradient, type and Data as Art.

02 **Digital experience** 10-16

Responsive grids, illustrative layouts, components, forms and accessibility.

03 **Website & content** 17-31

Architecture, homepage, service pages, approach, about, work, insights and contact.

04 **Delivery** 32-36

Content model, design tokens, implementation, release checks and source notes.

READING CONVENTION

Website-ready wording is shown under page-specific headings. Notes labeled “Build”, “Publish gate” or “Template” are internal instructions and must not be copied onto the live website. Numeric specifications are proposed design rules unless explicitly identified as a standard.

Clarity creates confidence

Proposed positioning and verbal identity for a data consulting business.

Positioning

VEERO helps organizations connect data work to the decisions that matter. The brand should feel precise, calm and capable: enough technical depth to earn trust, enough clarity to make the next step understandable.

Brand promise

Data into impact.
A concise expression of the intended outcome, not a guaranteed commercial result. Use it as the master brand line. The homepage develops it into “Turn data into impact.”

Audience and their questions

Business leaders: What will this help us decide or improve?
Data and technology leaders: Will this fit our systems and be maintainable?
Delivery teams: What happens next, who owns it, and what will we receive?

Voice rules

Use direct verbs: define, connect, build, explain, improve. Lead with the business question, then the method and deliverable. Prefer short sentences and specific nouns. Explain specialist terms on first use. Use “we” for accountable work and “you” for the client’s needs.

Language in practice

Use: “Bring scattered data into a shared view of performance.”
Avoid: “Unlock unparalleled synergy through next-generation transformation.”
Use: “We define success with your team before building.”
Avoid: “Guaranteed ROI in weeks.”

Editorial guardrails

Do not claim market leadership, proprietary technology, platform partnerships, regulated expertise or round-the-clock support without evidence. Avoid blanket AI promises. State limitations and dependencies alongside any approved outcome claim.

The wordmark

A provisional text treatment; the approved vector logo must replace it when supplied.

VEERO

PROVISIONAL TYPESET WORDMARK

Preferred treatment

Use the official VEERO wordmark as a single-color SVG: light on dark, ink on light. Until that asset is available, use Inter Bold uppercase as a temporary typeset label. Do not invent a symbol or treat the specimen above as a finalized logo.

Clear space and scale

Proposed minimum clear space: half the capital V height on every side. Minimum digital width: 96 CSS px; print width: 25 mm. In navigation, use a 112-128 px wordmark. Verify legibility against the final supplied artwork.

Background and placement

Place at the left edge of the content grid. Keep the entire clear-space zone free of dots and shapes. Use a solid background under the mark. The main brand name stays neutral; lime belongs to emphasis and interaction.

Do not

Do not stretch, outline, bevel, cast shadows, apply the lime gradient inside letters, recolor individual letters or place the logo over decorative art. Do not substitute a generic data icon.

Asset handoff

Request approved light/dark SVG masters, a small-size mark if one exists, PNG fallbacks and favicon assets. Record version and owner. Do not derive a favicon from a newly invented VEERO monogram without approval.

A precise palette

Exact proposed sRGB values. These are usable specifications, not verified colors from the missing mockups.

Forest black
#111A16
Primary hero / footer

Ink
#17211C
Body / headings

Signal lime
#C7F36B
Impact / primary CTA

Paper
#F7F8F4
Page background

Soft lime
#F3F9E9
Quiet tinted surface

Lime mist
#DFF7B7
Gradient tint only

Secondary text
#59665D
Supporting copy

Deep green
#456326
Links on light

Hairline
#D7DED3
Decorative dividers

Balance and use

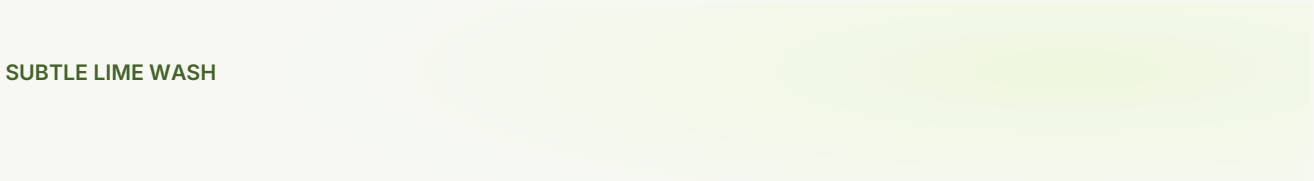

Aim for 75-85% neutral surfaces, 10-20% dark anchoring areas and no more than 5% high-intensity lime across a typical content page. This is an optical guideline, not a quota. Give every screen one dominant focal point.

Functional additions

White **#FFFFFF** is the clean surface token. Error **#A72B2B** is reserved for form feedback; pair it with a written message and icon. Do not use the brand lime as a success state by itself. These utility colors do not expand the expressive brand palette.

A gradient you almost miss

Lime should soften the atmosphere without becoming a special effect.

Proposed exact recipe

Base surface: **#F7F8F4**. Add one radial gradient: ellipse at 82% 24%, **rgba(199,243,107,0.16)** at 0%, **rgba(223,247,183,0.10)** at 40%, and **rgba(247,248,244,0)** at 72%. Keep the base opaque. The swatch above illustrates the softness; the CSS recipe is normative.

Placement and limits

Use in the upper-right of a light intro or a single transition band. Maximum one wash per viewport. Never put a high-chroma gradient behind long copy, inside a card, across a logo or on a button. No neon glow, blurry glass, perspective planes or wave-shaped boundaries.

PAIR	CONTRAST	USE
Ink / paper	15.49:1	Body + headings
Secondary / paper	5.65:1	Body + metadata
Lime / forest black	13.91:1	Hero emphasis
Ink / lime	12.95:1	Button label
Deep green / paper	6.42:1	Underlined links
Lime / paper	1.20:1	Decoration only

Ratios are calculated from the proposed solid sRGB colors. Recheck actual rendered states and every point behind text on a gradient. Lime on paper is not suitable for meaningful text.

One family. Clear hierarchy.

Proposed typeface: Inter. Use the same family for marketing, interface and data.

Turn data into impact.

ROLE	DESKTOP / MOBILE	WEIGHT / LINE HEIGHT
Display / hero	72 / 40 px	600 / 1.05
H1 / internal page	56 / 36 px	600 / 1.10
H2 / section	40 / 30 px	600 / 1.15
H3 / component	24 / 22 px	600 / 1.25
Lead	20 / 18 px	400 / 1.50
Body	18 / 16 px	400 / 1.60
Navigation / button	16 / 16 px	500-600 / 1.25
Caption / label	14 / 14 px	400-500 / 1.40

Typesetting

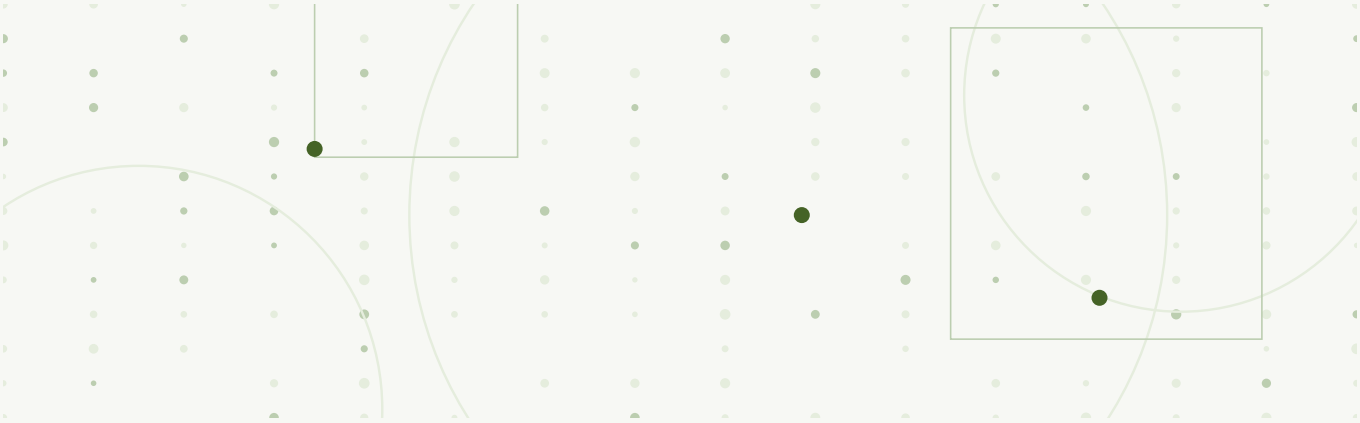

Use sentence case, left alignment and a 60-70 character reading measure. Display tracking: -0.035em; H1/H2: -0.025em; body: 0. Use uppercase only for short eyebrows, at 0.08em tracking. Use tabular numerals for actual metrics.

Delivery

Use self-hosted, licensed WOFF2 files and font-display: swap. Font stack: Inter, system-ui, -apple-system, BlinkMacSystemFont, "Segoe UI", sans-serif. Load only required weights. This PDF embeds Inter; final font approval remains pending.

Data as Art

Abstract information becoming ordered, legible and useful.

Visual grammar

Dots suggest individual observations. **Circles** suggest relationships and focus. **Squares** suggest structure and systems. Combine them in a restrained two-dimensional composition with large empty areas. They are expressive marks, not charts or claims about real data.

Construction rules

Use a 20-32 px underlying grid. Desktop dot diameter: 2-4 px, occasional accent: 6 px. Outlines: 1 px. Large circles: 160-320 px diameter; squares: 80-180 px, corner radius 0-4 px. Use 1-3 large shapes and one partial dot field per composition. Crop at the container edge.

Quiet by default

Background marks: 4-8% opacity on light surfaces; 8-16% on dark. Hero art may reach 24% opacity outside the text area. Use lime on at most three focal dots. Maintain a 48 px clear zone around live copy and controls. No blurred panels or simulated translucency.

Motion and transitions

Static is the baseline. Optional entry: a single 240 ms opacity reveal with at most 8 px translation; no continuous orbiting, parallax or cursor chase. Respect reduced motion. Between sections use whitespace, a hairline or a short pale gradient band.

Never use

Architecture, buildings, structural renders, glassmorphism, floating glass cards, waves, ribbons, liquid blobs, neon tunnels, stock “AI brains” or decorative graphs that look like measured evidence.

A grid that holds together

All dimensions below are CSS pixels. Breakpoints are proposed implementation rules.

VIEWPORT	GRID & GUTTER	SPACING
320-767	4 columns / 16 gap	20 side; 56 section
768-1199	8 columns / 24 gap	32 side; 80 section
1200+	12 columns / 24 gap	48 min side; 112 section

Container

Max content width: 1280 px. Center it with auto margins. Reading content: max 720 px. At 1440 px, the container has 80 px side margins. At 320 px, the 20 px inset leaves 280 px usable width. Do not impose fixed minimum widths.

Hero

Desktop: text 6 columns, art 5, one-column gap; 96 px vertical padding under a 80 px header. Tablet: text 5 columns, art 3; reduce display size to 56 px. Mobile: one column, 56 px top and bottom padding, copy and CTAs before art. Hero height follows content; avoid 100vh locking.

Content patterns

Cards: 3 across on desktop, 2 on tablet, 1 on mobile. Split sections become a single column below 768 px, preserving reading order. Mobile primary CTA is full-width; secondary CTA sits below with a 12 px gap. Tables scroll within a labeled region when necessary.

Spacing and shape

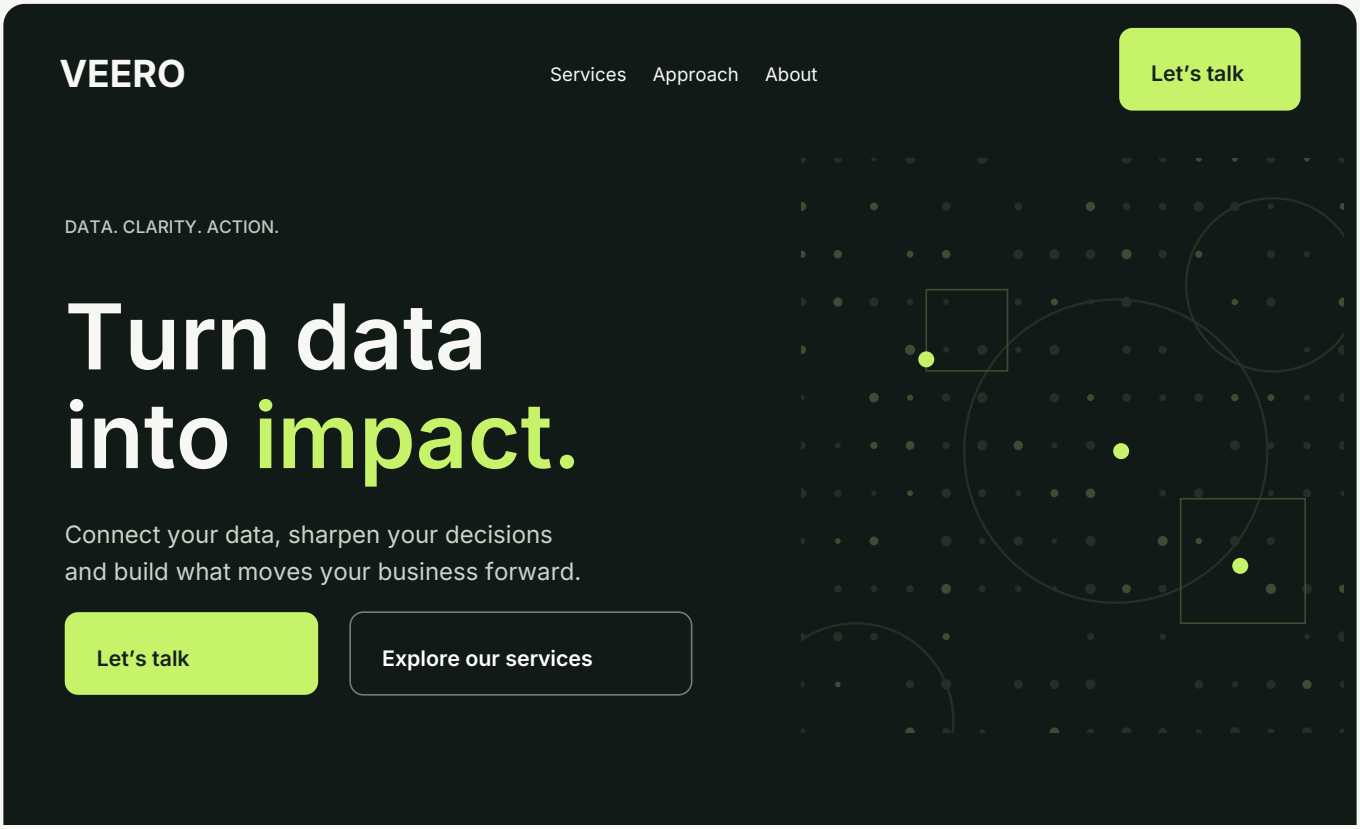

Use the scale 4, 8, 12, 16, 24, 32, 48, 64, 80, 112. Card padding: 32 / 24 px desktop/mobile. Control radius: 8 px; card radius: 12 px. Use flat surfaces and thin borders, not floating shadows.

Long content and zoom

Allow headlines to reflow naturally; never bake text into artwork. Do not insert permanent desktop-only line breaks on mobile. At 200% zoom, navigation can collapse. At 400% zoom / 320 CSS px equivalent width, content remains readable without page-level horizontal scrolling.

Homepage / desktop

Reconstructed visual direction, not the unavailable approved mockup. Viewport represented: 1440 px.

Clarity at every stage of your data journey.

Define the direction

Start with the decision.

Build the foundation

Connect trusted data.

Put data to work

Make insight usable.

Composition notes

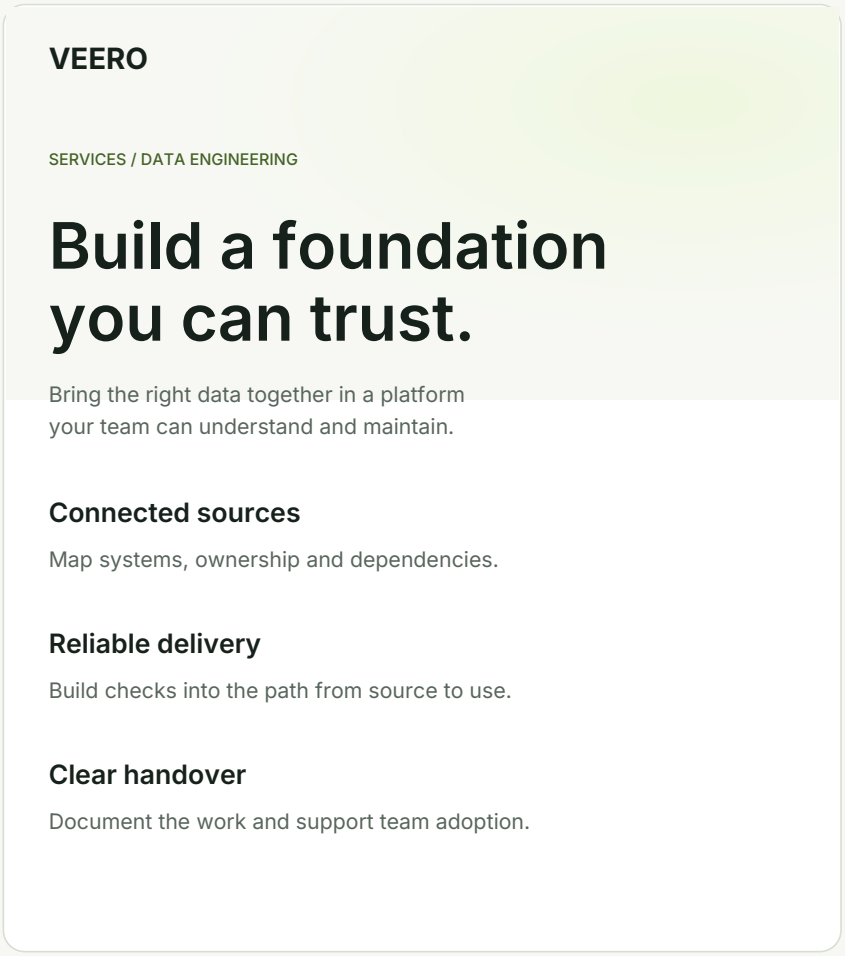

The lime word “impact” stays on the dark hero for contrast. Keep art to the right of the text and away from the navigation. The first light section establishes structure without adding a new visual language.

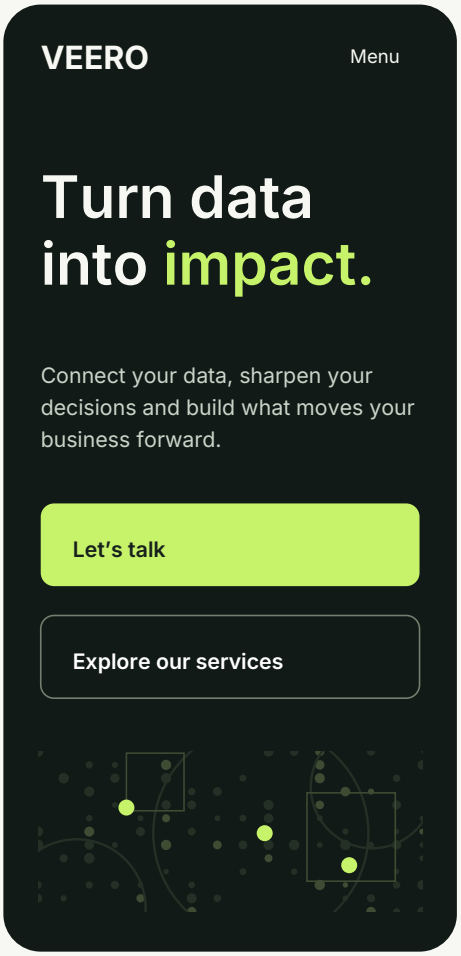

Build notes

The specimen compresses the content to show hierarchy. Use the full copy on pages 18-19. At full size, use the dimensions on page 10 and component rules on pages 13-15; do not scale this PDF screenshot into the website.

Content / mobile

Flat surfaces, generous spacing and the same geometric vocabulary at every scale.

Internal page pattern

Breadcrumb, single H1, concise lead, optional decorative field, then structured editorial sections. Use dark type on light surfaces; if “impact” appears in a light headline, use ink or deep green instead of low-contrast bright lime.

Small-screen behavior

Reduce decorative dot density by half. Art follows the CTA group and may be omitted on very short screens. Keep full body copy available. Do not move essential information into hover states or force horizontal card carousels.

Navigation & actions

Consistency comes from a small set of well-defined behaviors.

Header and navigation

Desktop height: 80 px; mobile: 64 px. Logo at left; Services, Approach and About in the main navigation; “Let’s talk” at right. Add Work and Insights only when eligible content exists. Use a solid surface. If sticky, retain an opaque background and account for the header in anchor offsets.

Mobile menu

Below 1200 px, use a labeled Menu button with aria-expanded and aria-controls. Open an opaque full-width navigation panel. For a modal drawer, move focus inside, make the rest of the page inert, close with Escape and return focus to the opener. Close after a route is selected. Never rely on an unlabeled hamburger icon.

Primary button

48 px minimum height; 20 px horizontal padding; 8 px radius; Inter 600 at 16 px. Background #C7F36B, text #17211C. Hover #B7E65B; pressed #A8D550. Keep label position stable. One primary action per section; label it with a clear verb.

Secondary button and text link

Secondary: transparent or white fill, 1 px #59665D border, ink text; on dark, use light text and a #AAB5A9 border. Hover adds a subtle solid tint. Text links use #456326 on light, #C7F36B on dark, plus an underline. Do not rely on color alone to distinguish links.

Focus, disabled and loading

Focus: 3 px deep-green outer ring on light surfaces; paper ring on dark, with a 3 px offset. Do not remove outlines. Disabled actions use muted neutral styling and native disabled where appropriate. During submission retain width, show “Sending…” and expose status; prevent repeat requests.

Navigation semantics

Use anchors for destinations and buttons for state changes. Mark the current route with aria-current="page" and a visible indicator. The logo links to Home with accessible name “VEERO home”. Provide a visible-on-focus “Skip to content” link before navigation.

Content components

Flat, structured modules that adapt without losing meaning.

Service card

Padding: 32 px desktop / 24 px mobile. Surface: white; border: 1 px #D7DED3; radius: 12 px. Title 24/30 px, description 18/29 px, one labeled link such as “Explore data engineering”. Avoid a clickable card wrapper with nested links. Optional hover border #59665D; no lift or glow.

Section heading

Eyebrow optional; heading mandatory. H2 max 18-22 words, lead max 45 words and 720 px wide. Keep 24 px between heading and lead, 40 px before its module grid. Do not repeat identical eyebrows above every section.

Process row

Use four numbered stages with a title and short explanation. On mobile, stack in a single ordered list. Numbers are sequence labels, not performance metrics. Keep stage content visible; do not hide the process in a slider.

Accordion

Use for secondary FAQs only. Heading contains a native button with aria-expanded and aria-controls. 56 px minimum trigger height and a 24 px icon. Support Enter/Space. Expanded content stays in document order; allow multiple items open. Do not hide primary selling points in an accordion.

Proof and article cards

Proof cards require an approved customer identifier, outcome, measurement context and permission status. Article cards require title, excerpt, topic, author and published date. Do not show read-time estimates unless calculated. Omit both modules when their records are unpublished.

Footer and closing CTA

Closing CTA: one H2, one short paragraph, one primary action on a dark block. Footer: wordmark, short brand statement, navigation and verified legal links. Use the actual copyright owner and current year. Add email or social links only when confirmed; do not invent an address.

Forms that help people finish

Contact is the primary conversion. Keep the form short and explicit.

Field specification

Use visible labels above every input. Input minimum height: 48 px; padding: 12-16 px; text: 16 px. Field border #59665D on white; radius 8 px. Textarea: minimum 160 px and vertically resizable. Required fields are marked in the label and explained once. Placeholder text supplements labels; it never replaces them.

Contact field set

Full name (required), work email (required), company (optional), and “What would you like to improve?” (required, maximum 2,000 characters). Permit personal email addresses; do not block them automatically. No phone field by default. Use autocomplete name, email and organization, with type="email" for email.

Validation and error copy

Validate on submit, then on blur after the field has been touched. Do not show errors on initial load. Use: “Enter your name.” / “Enter a valid email address.” / “Tell us a little about what you need.” / “Keep your message under 2,000 characters.” Preserve all input after failure.

Error and success behavior

Show a text error summary at the top with links to invalid fields. Associate field errors with aria-describedby and set aria-invalid. Submission failure: “Your message wasn’t sent. Please try again.” Success: “Thanks for getting in touch. We’ve received your message and will follow up using the email you provided.” Announce the result without moving focus unexpectedly.

Privacy and consent

Show a short notice linking to the verified Privacy notice. Do not bundle marketing consent into a contact request. If a newsletter is later offered, use a separate unticked opt-in with explicit wording. Do not promise a response time until operations confirm it.

Build requirements

Validate and sanitize on the server as well as the client; rate-limit the endpoint and use an accessible anti-spam approach. Confirm backend receipt before showing success. Keep message contents out of analytics and browser logs. Provide a fallback contact channel only after a real address is supplied.

Accessible by design

Target WCAG 2.2 AA for the implemented website. This specification is not a conformance audit.

Readable and perceivable

Normal text needs at least 4.5:1 contrast; large text at least 3:1. Essential control boundaries and visual states need 3:1 against adjacent colors. Do not rely on lime against paper for text or meaningful icons. Support text resizing and user text-spacing changes without clipping. [1, 2]

Keyboard and focus

Every interactive element is reachable and operable by keyboard, with a visible focus indicator. Sticky elements must not entirely obscure focused controls. Set scroll-margin-top for anchor targets. A 44 x 44 px product target is preferred; WCAG 2.2 AA uses a 24 x 24 px minimum with defined spacing and other exceptions. [1, 3, 4]

Structure and assistive technology

Set lang="en". Use header, nav, main and footer landmarks; one descriptive H1 and logical heading levels. Provide unique page titles. Decorative SVG fields use aria-hidden="true" and focusable="false"; decorative images have empty alt text. Real data graphics need a textual summary and access to the underlying values.

Motion and responsive behavior

Honor prefers-reduced-motion by removing decorative transitions. Do not auto-play looping artwork. Keep the page usable at 320 CSS px equivalent width. Do not lock orientation. Ensure meaningful content is available with images disabled and with CSS effects unsupported.

Test before publishing

Run automated checks, then test with keyboard only, VoiceOver with Safari and a Windows screen reader/browser combination. Check form errors, menu focus, zoom to 200% and 400%, forced colors and reduced motion. Test long headings and real content, not only the clean specimen.

Scope of this PDF

This is a visual design and content handoff, not a tagged accessible-PDF deliverable. Website accessibility must be verified on the finished implementation. The proposed color contrast calculations alone do not establish compliance.

Make the next step obvious

Primary journey: understand the offer, find a relevant service, understand the method, start a conversation.

ROUTE	PURPOSE	PUBLICATION
/	Positioning + services + next step	Core
/services	Service overview	Core
/services/data-strategy	Priorities and roadmap	Confirm scope
/services/data-engineering	Data foundations and delivery	Confirm scope
/services/analytics	Metrics, reporting and decisions	Confirm scope
/services/applied-ai	Specific, evaluated AI use cases	Confirm scope
/approach	Working model and handover	Core
/about	Purpose and principles	Verify facts
/contact	Contact form	Connect backend
/work + /work/[slug]	Evidence and case studies	Conditional
/insights + /insights/[slug]	Useful editorial content	Conditional
/privacy	Actual data-handling notice	Legal review
/accessibility	Accurate support statement	Audit + contact
/404	Helpful missing-page response	Core

Navigation and launch scope

Launch menu: Services, Approach, About, Let’s talk. Services hub links to all confirmed service pages. Conditional routes stay out of navigation, sitemap and internal promotions until real content is approved. Do not launch empty Work or Insights pages.

Internal links

Each service page links to Approach, a related service and Contact. Approved case studies link back to their service. Insights link to relevant service pages only where useful. Breadcrumbs expose hierarchy on service, work and article detail pages.

Homepage / opening sequence

Route: / | All copy is proposed and subject to confirmation of VEERO’s service scope.

Hero

Eyebrow: Data. Clarity. Action.
H1: Turn data into impact.
Lead: Connect your data, sharpen your decisions and build what moves your business forward.
Primary CTA: Let’s talk → /contact
Secondary CTA: Explore our services → /services

Section 1 / value proposition

H2: Clarity at every stage of your data journey.
Data becomes useful when it answers a real question. We help you define that question, build the foundations and turn the result into something your team can use.

Three value blocks

Define the direction. Align your data priorities with the decisions and outcomes that matter to your business.

Build the foundation. Bring systems, data and ownership together so your teams can work from a clearer starting point.

Put data to work. Make information usable through analytics, practical tools and carefully evaluated AI.

Section 2 / services introduction

H2: Start where you are. Build what you need.
Whether you need a focused roadmap or help delivering a data solution, begin with the challenge in front of you.

Service cards / first pair

Data strategy. Set priorities, define success and create a practical plan for your data work.
Link: Explore data strategy → /services/data-strategy

Data engineering. Connect sources and build dependable foundations for reporting, analytics and applications.
Link: Explore data engineering → /services/data-engineering

BUILD

Render only “impact” in signal lime within the dark H1. Art is decorative. The wording, links and primary action remain real HTML. Continue with the remaining cards and sections on the next page.

Homepage / depth & conversion

Keep the scroll purposeful: offer, method, verified evidence when available, then contact.

Service cards / second pair

Analytics & BI. Turn scattered reports into a shared view of performance and the questions behind it.
Link: Explore analytics → /services/analytics

Applied AI. Find a useful application, test it with relevant data and understand what it takes to put it to work.
Link: Explore applied AI → /services/applied-ai

Section 3 / method

H2: A clear path from question to delivery.
01 / Understand. Agree on the problem, the users and what success would mean.
02 / Design. Map the data, decisions and technical choices before committing to the build.
03 / Build. Deliver in focused steps, with reviews that keep the work connected to the goal.
04 / Enable. Document the solution and help your team use and maintain it.
Link: How we work → /approach

Section 4 / evidence, conditional

H2: See the work in context.
Explore the challenge, the choices and the outcome behind a completed engagement.
Link: Explore our work → /work
Publish gate: Omit this entire section until at least one approved case study is available. Never use a generic customer-logo strip as a substitute for evidence.

Closing CTA

H2: What could better data make possible?
Tell us what you're trying to change. We'll start with the question and explore the next useful step.
Button: Let's talk → /contact

SEO and build

Title: VEERO | Data strategy, engineering & analytics
Description: Connect data work to better decisions. Explore VEERO's approach to data strategy, engineering, analytics and applied AI.
Order: Hero → value → services → approach → approved work, if available → CTA → footer. No invented metrics, testimonial carousel or unverified partner badges.

Services / a connected offer

Route: /services | Page goal: help readers choose a relevant starting point.

Hero

H1: The right data work for your next step.
From defining the direction to building the solution, we connect technical work to the decisions your business needs to make.
CTA: Discuss your priorities → /contact

Service overview

Data strategy. Understand where you are, decide what matters and create a roadmap your team can act on. Start here when priorities compete or the path forward is unclear.
Link: Explore data strategy

Data engineering. Build the pipelines, models and controls that make data easier to use and maintain. Start here when sources are fragmented or delivery is unreliable.
Link: Explore data engineering

Service overview / continued

Analytics & BI. Align definitions and create reporting that helps people make decisions. Start here when reports disagree or useful answers are hard to find.
Link: Explore analytics

Applied AI. Test a specific use case against the data, workflow and evaluation it needs. Start here when you have a promising idea and need to understand its practical value.
Link: Explore applied AI

How the services connect

H2: One challenge can cross several disciplines.
A reporting problem may begin with unclear definitions. An AI use case may depend on better data foundations. We help identify the underlying need and agree on a scope that fits it.

Closing CTA

H2: Not sure where to begin?
Describe the challenge in your own words. We can work together to identify a useful starting point.
Button: Let’s talk → /contact

SEO and build

Title: Data services | VEERO
Description: Explore data strategy, engineering, analytics and applied AI services built around a clear business question.
Use four cards in a 2 x 2 desktop grid; single column on mobile. Each link resolves to its service route. Hide any offer VEERO does not confirm.

Data strategy

Route: /services/data-strategy | Breadcrumb: Home / Services / Data strategy.

Hero

H1: Give your data work a clear direction.
Align business priorities, data capabilities and practical next steps in one plan.
CTA: Discuss your data priorities → /contact

When it helps

H2: Start with the decisions that matter.
You may have useful data and capable teams, yet still lack a shared view of what to tackle first. We help frame the questions, surface dependencies and connect potential projects to the outcomes you want to improve.

Scope

H2: Build a roadmap people can use.
Understand the starting point. Review key data sources, workflows, ownership and current pain points.
Prioritize opportunities. Compare business relevance, effort, readiness and dependencies.
Define the path. Agree on target capabilities, responsibilities and a practical sequence of work.

Deliverables

H2: Leave with a shared plan.
A typical scope may include a current-state assessment, a prioritized use-case backlog, a target-state outline and a phased roadmap with owners and success measures. Deliverables are agreed for each engagement.

FAQ

Do we need a mature data platform to begin?
No. The starting point is the business problem and the data you have today.

Does a strategy engagement include implementation?
Implementation can be scoped separately once priorities and dependencies are clear.

Closing and metadata

CTA heading: Make the next step a deliberate one.
Button: Let’s talk → /contact
Related: Data engineering; Our approach.
Title: Data strategy & roadmaps | VEERO
Description: Align business priorities and data capabilities with a practical roadmap, clear responsibilities and agreed measures of success.

Data engineering

Route: /services/data-engineering | Breadcrumb: Home / Services / Data engineering.

Hero

H1: Build a foundation you can trust.
Bring the right data together in a platform your team can understand and maintain.
CTA: Discuss your data foundation → /contact

When it helps

H2: Make data easier to depend on.
Disconnected sources, manual transfers and unclear ownership make every new question harder to answer. We help connect the pieces and define how data should move, be checked and reach the people who need it.

Scope

H2: From source to usable data.
Connect. Map source systems, access needs and dependencies.
Model. Structure data around its intended use and agreed definitions.
Operate. Build checks, monitoring and documentation into the delivery process.

Deliverables

H2: A foundation your team can work with.
Depending on the agreed scope, deliverables may include ingestion pipelines, transformed data models, quality checks, operational documentation and a handover plan. Platform choices should fit your environment and constraints.

FAQ

Do we have to replace our current platform?
Not necessarily. We begin by understanding what works, what limits you and what needs to change.

Who maintains the solution?
Ownership and ongoing support are agreed during scoping, with handover responsibilities made explicit.

Closing and metadata

CTA heading: Give the next decision a stronger foundation.
Button: Let’s talk → /contact
Related: Analytics & BI; Our approach.
Title: Data engineering & foundations | VEERO
Description: Connect sources, structure data and build maintainable foundations with clear ownership, quality checks and a practical handover.

Analytics & BI

Route: /services/analytics | Breadcrumb: Home / Services / Analytics & BI.

Hero

H1: Make the numbers useful.
Create a shared view of performance and a clearer way to answer the questions behind it.
CTA: Discuss your reporting needs → /contact

When it helps

H2: Move from reporting activity to decision support.
More dashboards do not always mean more clarity. We start with the people using the information: what they need to decide, what they need to understand and where the current reporting falls short.

Scope

H2: Build a common language for performance.
Define. Agree on metrics, calculation rules, owners and decision needs.
Design. Shape reports and dashboards around real user workflows.
Adopt. Review with users, refine the experience and document the meaning behind the numbers.

Deliverables

H2: More than a finished dashboard.
A scoped engagement may include a metric dictionary, a reporting model, dashboard designs, implemented reports and guidance for users and maintainers. The measure of usefulness is agreed with the people who will use the work.

FAQ

Can you work with our existing BI tools?
We review your environment before recommending a delivery approach. Tool compatibility is confirmed during scoping.

What if our teams disagree on the metrics?
We make definitions and ownership part of the work before building a shared view.

Closing and metadata

CTA heading: Bring your next decision into focus.
Button: Let’s talk → /contact
Related: Data strategy; Data engineering.
Title: Analytics & business intelligence | VEERO
Description: Align metric definitions and create useful reporting, dashboards and guidance around the decisions your team needs to make.

Applied AI

Route: /services/applied-ai | Publish only if VEERO confirms this service.

Hero

H1: Put AI to a useful test.
Start with a specific workflow, evaluate the result and understand what responsible delivery requires.
CTA: Discuss an AI use case → /contact

When it helps

H2: A promising idea needs a clear test.
AI is useful when it fits the task, the available data and the people doing the work. We help turn a broad ambition into a focused use case with practical evaluation criteria.

Scope

H2: Evaluate before you scale.
Frame. Identify the user need, expected value and limits of the use case.
Test. Build a scoped prototype and assess it against representative examples.
Plan. Define human review, integration, monitoring and the conditions for a production decision.

Deliverables

H2: Evidence for the next decision.
A scoped engagement may include a use-case brief, data-readiness review, prototype, evaluation findings and a recommendation to proceed, refine or stop. A prototype is not a production guarantee.

FAQ

Will AI replace the people doing this work?
We begin with the workflow and agree where human judgment and review remain necessary.

Can every successful prototype go live?
No. Reliability, privacy, integration, cost and operational ownership must be assessed before production.

Closing and metadata

CTA heading: Start with the use case. Test the value.
Button: Let’s talk → /contact
Related: Data strategy; Data engineering.
Title: Applied AI evaluation & prototypes | VEERO
Description: Explore focused AI use cases through data-readiness review, prototyping and evaluation before making a production decision.

Our approach

Route: /approach | Confirm the working model with VEERO before publishing.

Hero

H1: Clear thinking. Practical delivery.
A shared understanding of the problem, a focused plan and a solution your team can use.
CTA: Discuss your challenge → /contact

01 / Understand

H2: Agree on the question.
We listen to the people closest to the challenge, review the current situation and define what a useful outcome would look like.
Output: A shared problem statement, initial scope and success criteria.

02 / Design

H2: Make the choices explicit.
We map the data, workflows and dependencies, then agree on a delivery approach that fits the context.
Output: A proposed solution, a prioritized plan and clear responsibilities.

03 / Build

H2: Deliver in focused steps.
We turn the plan into working increments and review them with your team. Feedback helps keep the work tied to the original need.
Output: Tested deliverables, review notes and documented decisions.

04 / Enable

H2: Make the work usable beyond delivery.
We document the solution and agree how your team will use, maintain and develop it.
Output: Handover materials, ownership and a plan for the next step.

Closing and metadata

H2: A working relationship with fewer unknowns.
Scope, responsibilities and review points are agreed together. When assumptions change, the plan should change with them.
Button: Let’s talk → /contact
Title: How we work | VEERO
Description: Understand VEERO’s approach to defining the problem, designing the solution, delivering in focused steps and enabling your team.

About VEERO

Route: /about | A principles-led draft that avoids invented company history.

Hero

H1: Data work should move the business forward.
VEERO connects business questions with practical data work. Our focus is on making complex information clearer and useful decisions easier.
CTA: Start a conversation → /contact

Purpose

H2: Clarity is the starting point.
The value of data does not come from collecting more of it. It comes from understanding what matters, building the right foundations and helping people put the result to use.

Principles

Start with the question. Understand the decision before choosing the solution.

Make complexity understandable. Explain choices, assumptions and trade-offs in language the whole team can use.

Build for ownership. Treat documentation, maintainability and handover as part of delivery.

Keep the outcome in view. Review the work against the agreed purpose, not only the technical task list.

Team / conditional module

Suggested H2: Meet the people behind the work.
Add real names, roles, short approved biographies and licensed portraits only after they are supplied. If no team assets are approved, omit this module. Do not use stock portraits, fictional biographies or unsupported experience claims.

Closing and metadata

H2: Bring us the question you're working on.
We'll explore where data can help and what a useful next step could look like.
Button: Let's talk → /contact
Title: About VEERO | Data into impact
Description: Learn about VEERO's focus on clear questions, practical data foundations and solutions that people can use and maintain.

PUBLISH GATE

Verify the positioning and principles with the owner. Add founding date, locations, team size, credentials or sector experience only when documented. No such facts are established by the retrieved conversation.

Work / proof with context

Routes: /work and /work/[slug] | Conditional pages; keep unpublished until evidence exists.

Work index / publishable shell copy

H1: The work behind the outcome.
Explore the challenge, the choices and what changed through a completed engagement.
Card link: Read the case study
Closing H2: Facing a similar challenge?
Tell us what you're trying to change.
Button: Let's talk → /contact

Case study / editorial template

H1: [Approved outcome or project title]
Lead: [Customer or approved anonymous description] needed to [verified challenge]. VEERO worked on [agreed scope] to support [documented objective].
Context: Explain the starting point, users and constraints.
Approach: Describe the actual choices, contributions and delivery.
Outcome: Report documented changes and their limitations.
Next: State the agreed follow-on work only if approved.

Metric publishing rule

For every number, record baseline, end value, unit, measurement period, method, source and owner approval. Show material context beside the claim. Distinguish a percentage change from percentage points. Do not imply that VEERO alone caused a result unless the evidence supports that attribution.

Testimonials and logos

Use only a verbatim approved quotation with verified speaker, role and organization. Keep consent and approved wording on record. Logos require current permission and correct artwork. Do not fill empty slots with famous brands, vendor logos, AI-generated quotes or "example clients".

Metadata and build

Index title: Selected work | VEERO
Index description: Explore approved VEERO case studies, including the business challenge, delivery approach and documented outcomes.
Detail title: [Approved project title] | VEERO
Write a unique factual description for each real case. Keep bracketed fields out of public HTML, metadata and social previews.

NO EVIDENCE, NO MODULE

There are no real customer metrics, testimonials, logos or case results in this book. The template is not a fictional case study. Hide the entire proof section and its navigation links until verified content is available.

Insights / useful thinking

Routes: /insights and /insights/[slug] | Publish the index only with an approved article.

Index hero

H1: Clear thinking about data.
Practical perspectives on turning data questions into decisions, foundations and useful tools.

Featured article card / proposed draft

Topic: Data strategy
Title: Start with the decision, not the dashboard
Excerpt: Before building another report, clarify who will use it, what they need to decide and which information will help.
Link: Read the article → /insights/start-with-the-decision
Assign a real approving author and publication date before making this draft public.

Listing behavior

For a small collection, use a simple grid in reverse publication order. Add topic filters only when there is enough content to make them useful. Use labeled buttons, visible selected states and an announced result count. Keep filter state in the URL if filtering is introduced.

Empty and filtered states

No filter results: “No articles match this topic yet. View all insights.”
Reset label: View all insights
If the entire collection is empty, do not launch the index or display an empty module on the homepage.

Article layout

Show breadcrumb, topic, H1, short introduction, real author and publication date. Keep body width at 720 px, with 18 px desktop text and 1.6 line height. Use a linked contents list for long articles, descriptive subheadings and a quiet closing CTA. No decorative art behind reading text.

Metadata

Index title: Data insights | VEERO
Index description: Practical perspectives on data strategy, engineering, analytics and applied AI, written to connect technical work with business decisions.
Article title: Start with the decision, not the dashboard | VEERO
Article description: A practical way to define the audience, decision and evidence behind a useful dashboard before you begin the build.

Start with the decision, not the dashboard

Proposed editorial copy | Author and publication date must be supplied before publication.

A report is a means, not the goal

When a team asks for a new dashboard, the request often arrives as a list of charts. Revenue by month. Pipeline by stage. Delivery against plan. These may all be useful views, but the first question is simpler: what decision should this information help someone make?

Name the user and the moment

“The business” is too broad an audience. Identify the person or team, the decision they own and when they need to make it. A weekly operational review may need a different view from a quarterly planning meeting, even when both use the same underlying data.

Define what would change

Ask what someone would do differently after seeing the information. If a metric moves, who investigates? What comparison helps them interpret the movement? What context would stop them from drawing the wrong conclusion? These questions connect a display to a useful action.

Agree on the meaning of the numbers

A clean chart cannot resolve an unclear definition. Agree on how each measure is calculated, what it includes and excludes, how often it updates and who owns it. Record those choices where users can find them. A shared definition is part of the product.

Build the smallest useful view

Start with the information needed for the decision you have defined. Review it with the people who will use it. Watch where they hesitate, what they misunderstand and which questions remain unanswered. Use that feedback to improve the view before expanding it.

Keep the decision visible

A dashboard is easier to evaluate when its purpose is explicit. Write that purpose down and revisit it as the business changes. Sometimes the next improvement is another chart. Sometimes it is a clearer definition, better source data or a different way of working.

Closing CTA

Working through a reporting challenge?
Let’s explore the decisions your reporting needs to support.
Link: Discuss your analytics needs → /contact

Contact / start with the question

Route: /contact | Submit to a real, tested destination before launch.

Hero

H1: Let’s talk about what’s next.
Tell us what you’re trying to improve, where you are today and what you’d like to make possible. You do not need a finished brief to start a conversation.

Form copy

Full name *
Work email *
Company (optional)
What would you like to improve? *
Help text: Share the challenge, not confidential data. Please keep your message under 2,000 characters.
Required-field note: Fields marked * are required.
Submit: Send message

Privacy microcopy / verify against actual practice

“We’ll use these details to respond to your enquiry. Read our Privacy notice.” Link “Privacy notice” to /privacy. This wording requires confirmation that the actual processing matches it. Do not use a mandatory marketing checkbox.

Submission states

Loading: Sending…
Success heading: Thanks for getting in touch.
Success body: We’ve received your message and will follow up using the email you provided.
Failure: Your message wasn’t sent. Please try again.
Keep entered text after a failure and allow a safe retry.

Optional supporting copy

H2: A useful starting point.
You might be setting priorities, improving reporting, connecting data sources or testing an AI idea. Tell us what is on your mind and we’ll explore where to begin.

Metadata and layout

Title: Contact VEERO | Let’s talk
Description: Tell VEERO about your data challenge and explore a useful next step in strategy, engineering, analytics or applied AI.
Desktop: intro 5 columns, form 6 columns, 1-column gap. Mobile: intro above form. No invented phone number, office address, meeting link or response-time promise.

Utility pages & global copy

A complete experience includes honest error handling and verified legal information.

404 / missing page

H1: This page isn’t here.
Body: The link may have changed, or the page may no longer be available.
Primary link: Back to home → /
Secondary link: Explore our services → /services
Title: Page not found | VEERO
Return HTTP 404; do not redirect every missing URL to Home.

Privacy notice / launch-blocking content brief

H1: Privacy notice
Intro: This notice explains how [verified legal entity] handles personal information when you use this website or contact us.
Complete with verified identity/contact, collected data, purposes, applicable legal basis, recipients/processors, transfers where relevant, retention, rights and contact procedure, cookies/analytics and effective date. Publish only reviewed text that reflects actual operations. This is a drafting structure, not legal advice or a ready-to-publish policy.

Accessibility page / factual statement

H1: Website accessibility
Draft opening: We want this website to be usable by as many people as possible. If you encounter a barrier, please contact us through our contact page and describe what happened.
Add a verified alternate contact method, review date, audit scope, known limitations and remediation status. Do not claim full conformance without evidence. Ensure the contact path itself is accessible.

Cookie controls / only when applicable

If the implemented tools require consent, obtain review of the real configuration. Provide equal-access options such as “Accept optional cookies”, “Reject optional cookies” and “Manage preferences”. Do not load optional tools before the appropriate choice. Do not show a decorative banner that controls nothing.

Global footer

Brand line: Data into impact.
Supporting line: Clear questions. Practical data work.
Links: Services / Approach / About / Contact / Privacy / Accessibility. Add Work and Insights only when published.
Copyright template: © [current year] [verified legal owner]. All rights reserved.
Replace the bracketed fields; verify policy titles and metadata before release.

Content that can be maintained

Separate reusable content from layout; treat publication as an explicit state.

RECORD	REQUIRED FIELDS
Site settings	Approved logo assets; navigation; verified entity/contact; footer; default social image.
Service	Title; slug; lead; use cases; scope; deliverables; FAQs; CTA; related pages; scope approval.
Case study	Customer permission; challenge; scope; outcome; metric evidence; approved quote/logo permissions.
Article	Title; slug; excerpt; body; topic; real author; date; references where needed; approval.
Shared page fields	SEO title/description; social preview; status; reviewer; reviewed date; content version.

Publishing states

Use Draft → In review → Approved → Published. Preview links must be non-public or access-controlled as appropriate, with noindex. The build must exclude drafts from public routes, sitemap, navigation and feeds. A record does not become publishable simply because all fields contain text.

Ownership

Brand owner approves visual assets and tone. Service owner validates capability and scope. Customer/account owner validates case-study permission and evidence. Editorial owner checks copy and metadata. Developer verifies behavior, accessibility and privacy implementation.

Placeholder control

Use typed placeholders in the CMS, not plausible fake values. Fail publishing if bracketed tokens, lorem ipsum, sample metrics, placeholder people, stock client logos or unapproved quotes remain. Keep an evidence register linking every public proof claim to its source and sign-off.

Ongoing upkeep

Review service claims, policy content and contact routing when the business changes. Check external links and permission status periodically. Archive stale articles intentionally and preserve useful redirects when routes change.

Translate the system into tokens

CSS reference for the proposed system. Copy into the project after brand confirmation.

```
/* Proposed VEERO tokens - pending brand confirmation */
:root {
  --veero-dark: #111a16;
  --veero-ink: #17211c;
  --veero-lime: #c7f36b;
  --veero-paper: #f7f8f4;
  --veero-white: #ffffff;
  --veero-soft: #f3f9e9;
  --veero-mist: #dff7b7;
  --veero-muted: #59665d;
  --veero-green: #456326;
  --veero-line: #d7ded3;
  --veero-error: #a72b2b;
  --content-max: 80rem;
  --reading-max: 45rem;
  --radius-control: .5rem;
  --radius-card: .75rem;
  --wash: radial-gradient(ellipse at 82% 24%,
    rgba(199,243,107,.16) 0%,
    rgba(223,247,183,.10) 40%,
    rgba(247,248,244,0) 72%);
}
.hero { background: var(--veero-dark); }
.hero em { color: var(--veero-lime); font-style: normal; }
.quiet-intro {
  background: var(--wash), var(--veero-paper);
}
.container {
  width: calc(100% - 2.5rem);
  max-width: var(--content-max); margin-inline: auto;
}
@media (min-width: 48rem) {
  .container { width: calc(100% - 4rem); }
}
@media (min-width: 75rem) {
  .container { width: calc(100% - 6rem); }
}
```

Use semantic aliases for text, background, border and interactive states. Keep the values in one source of truth shared by the design file and application. The CSS above is a foundation, not a complete stylesheet.

Build for clarity and resilience

Use semantic HTML, stable layouts and a small, maintainable component set.

Structure and rendering

Build reusable Header, Footer, Hero, SectionHeading, ServiceCard, ProcessSteps, Accordion, ContactForm and optional CaseStudyCard/ArticleCard components. Favor server-rendered or static content pages. Keep meaningful copy and links available without decorative JavaScript. Use real heading and list elements rather than styled generic containers.

Artwork and assets

Create the Data as Art field as optimized SVG with a deterministic layout. It must remain independent of live text, clipped within its own container and non-interactive. Limit the field to a few hundred simple nodes; use a reusable pattern for dots. Keep SVG IDs unique. Export social previews separately with approved wordmark and no fabricated proof.

Responsive styles

Implement typography and spacing tokens rather than per-page overrides. Use fluid display sizing between the specified bounds. Use minmax(0,1fr) for grids, width:100% for media and overflow-wrap where long text can occur. Test 320, 375, 768, 1024, 1280 and 1440 px, including a zoomed viewport.

Performance budgets / project targets

Aim for no hero raster image; keep decorative SVG under 30 KB compressed and first-load font transfer under 150 KB where feasible. Set an initial JavaScript budget of 150 KB compressed for marketing routes. These are proposed budgets, not measured results. Track loading, layout stability and interaction on representative mobile conditions.

Search and sharing

Write unique titles/descriptions from the copy pages. Use a verified canonical domain, sitemap and robots rules. Return correct HTTP status codes. Add structured data only for verified organization and published articles; never emit invented review ratings. Social images use 1200 x 630 px with generous cropping safety.

Contact and measurement

Use a secure server endpoint and verified delivery destination. Track only necessary events, such as contact_cta_click and contact_submit_success, with placement or service category. Never include names, emails, messages or free-text field values in analytics. Make measurement conditional on the applicable consent configuration.

Definition of ready to launch

Do not confuse a finished layout with a verified public website.

Brand and design

Compare the implemented hero and content page against the original approved mockups when supplied. Confirm palette and font names. Replace the provisional wordmark with approved assets. Check dark/light states, gradient strength, mobile art density and alignment. Remove architectural, glass and wave imagery.

Content and evidence

Owner approves service scope and all public copy. Verify legal name, contact routing and support details. Replace or remove every bracketed token. Proof modules require documented evidence and permission. Approve the article author/date before publishing Insights. No fictitious metrics, testimonials or client logos.

Functional checks

All links resolve to the intended routes. Navigation works with keyboard and touch. Contact success reflects backend receipt; failure preserves entered content. Test invalid input, slow requests, duplicate submission prevention and server failure. Verify 404 behavior, redirects, metadata and draft exclusion.

Accessibility and visual checks

Test contrast and focus in every state, zoom/reflow, meaningful link labels, screen-reader form errors, menu focus management and reduced motion. Inspect long titles, real copy, empty states and large text. Run automated checks and manual interaction tests on the built site.

Delivery package

Provide the approved design file; token source; official logos; licensed fonts; SVG artwork; responsive components and state designs; page copy in the CMS; metadata; evidence register; analytics/consent configuration; and a record of test results. Assign an owner to each remaining issue.

Outstanding inputs for this edition

Original approved homepage and content mockups; exact palette and font selection; official VEERO logo assets; confirmation of the service offering; legal identity and contact destination; any real team, customer, case-study or testimonial material. The book is a detailed working specification until those inputs are reconciled.

APPROVAL BOUNDARY

This PDF supplies a complete proposed design/content system. It does not certify that the unseen mockups were matched, that company claims are verified, or that an unbuilt website meets accessibility or performance requirements.
